Algorithm Audit

masterclass | in-person | 1-day

Masterclass AI Evaluation: from General Purpose to Specific Use Cases

How can you tell if an AI model is suitable for a use case? When do you know it works as intended? Leading systems are scored on general capabilities, not how they fit real-world problem areas, organizational values and stakeholder concerns. For example, a Dutch judiciary authority's chatbot will refuse a resident's question about who maintains the 'privé gedeelte' of an apartment building, because a content filter designed in English flags the words 'private parts' as sexual content. A 2025 study found that a Dutch municipality chatbot pointed new residents named Mehmet or Fatima who asked about housing help to asylum services, while Lotte and Martin were told about income support. The original model from OpenAI showed no such bias – it only appeared when it was adapted to the Dutch context.

Practitioners need understanding of how existing evaluations translate to a context and where gaps arise. Custom benchmarks and practical validation are often required. In this masterclass, we distill the most valuable insights from our work within GPAI evaluation – which spans the development of risk-monitoring benchmarks for the EU AI Office, a validation framework for the Dutch Judiciary's Rechtspraak chatbot and safeguards for Dutch generative AI.

After attending, participants will be able to:
> Understand relevant obligations for GPAI systems under the AI Act
> Navigate popular evaluation repositories and documentation
> Assess the suitability of existing benchmarks for their own work
> Determine when custom evaluation or validation is needed and how it may look

Tue Nov 3rd 10:00–17:00 CET

The Hague Conference Centre (New Babylon)
Anna van Buerenplein 29, 2595 DA Den Haag

€ 300 (in-person)
(including, lunch, drinks, refreshments)

Register

Algorithm Audit

For whom

Max. 25 professionals from private and public sector who regularly work with GPAI application, such as implementation of generative AI solutions in work processes, testing GPAI capabilities and/or working on AI policy.

Instructors

Jurriaan Parie
Director and board member at Algorithm Audit

Kaloyan Filipov
AI Advisor and Validator at Algorithm Audit

Program

Time	Topic	Instructor
09:30-10:00	Doors open	
10:00-11:15	Introduction General Purpose AI (GPAI) and testing GPAI applications	Jurriaan Parie
11:15-11:30	*Break – coffee, tea and refreshments*	
11:30-12:30	State-of-the-art concepts and developments in GPAI benchmarking	Kaloyan Filipov
12:30-13:30	*Lunch – catered*	
13:30-14:45	Case study from Dutch public sector	Jurriaan Parie
14:45-15:15	*Break – coffee, tea and refreshments*	
15:15-16:30	Hands-on exercises to build practical experience	Jurriaan, Kaloyan
16:30-17:30	*Drinks – catered*
